Prices are F.O.B. mill, excluding freight

What has been a crazy market stretched into the realm of ridiculous this week as prices shot up yet again on lack of supply. New home sales appear to be the main driver of the market, which is difficult to reconcile with the number of unemployed across the country. Producers are contentedly riding the wave and appear to be resisting the urge to beef up production levels. Buyers are wary of the high prices but in many cases cannot delay purchases. What goes up must come down, the big question is when?
